6 TEX_G6
Alpha activation differentiation
RNA MRNA processing
Antigen response immunity
DNA transcription repair
Mitotic cell cycle phase transition
Regulation of attachment of spindle microtubules to kinetochore
Chromosome segregation
Chromosome localization
organization involved in mitosis
Actin polymerization assembly
Leukocyte migration chemotaxis
Establishment of organelle localization
Pyrimidine monophosphate metabolic
Vesicle localization membrane
Endothelial growth factor
Protein autophagy acetylation
Glucose biosynthetic metabolic
Postsynaptic synapse assembly
Response mitochondrial apoptotic
Lipoprotein lipid metabolic
Neuron differentiation development
Epithelial morphogenesis development
Proteoglycan biosynthetic metabolic
Hormone metabolic biosynthetic
Bone chondrocyte differentiation
Sodium potassium ion
Sensory camera eye
Cardiac development morphogenesis
Fatty acid metabolic
Synaptic secretion behavior
Acid transmembrane transport
Insulin protein secretion
Skeletal cardiac muscle
Calcium ion transmembrane
5489 gene sets, TSNE on gene-set similarity
